

Data Breach statement from Dr Eidson

There has been no known hack, just data unprotected by our electronic health record servers. We do NOT store any data here-it's all accessed via a firewall protected router to secure servers in Tennessee. This company, Paradigm located in TN, is where the data was found to be vulnerable, not that it WAS accessed, JUST VULNERABLE.

This occurred with every office they support with electronic records.

Please sign up for the free credit monitoring, as Dr Eidson, her entire staff and family have as added protection.
